

INVESTOR OFFERING · BUILD · RETAINER · ADD-ONS

One record shop. Five sales channels. Owned end-to-end.

Public storefront, in-store POS, unified back office, marketplace sync across Discogs, Tokopedia and Shopee, marketing and reports — built as one system so every sale, every stock count and every customer belongs to the shop, not the platform.

PREPARED FOR

Investors, Medium Format
Jakarta · Independent record shop

CONTENTS

10 sections · 7 features
Strategy · Mockups · Pricing · Retainer

ISSUED

10 Jul 2026
Valid through 09 Aug 2026

Three forces make own software urgent. Right now.

STRATEGY • 2026

Every extra year the shop operates on rented platforms and off-the-shelf counter software, more margin leaks and more customer data belongs to someone else. These are the three forces investors should weigh.

FORCE 01 • FEES

Marketplace fees keep rising in Indonesia

Tokopedia and Shopee raised seller commissions across 2024–2025. Every rupiah of margin now competes with the platform first, other sellers second. Own site takes the transaction directly.

PER RP 500,000 SALE

Rp 32,500 lost to Toped commission + payment fee.

Own site (Xendit QRIS ≈ 0.7%): only **Rp 3,500** lost.

FORCE 02 • FUNNEL

Instagram & Facebook Marketplace are dark funnels

Buyers discover on IG or FB Marketplace, then DM to ask about price and stock. Payment ends up as a screenshot & bank transfer photo. No cart, no email captured, no retargeting.

THE REDIRECT

Every IG / FB click should land on a **Medium Format** product page — cart, checkout, and customer captured on **your** domain, not in a DM thread.

FORCE 03 • OPS

Off-the-shelf POS splits the shop in half

Moka, Pawoon and similar counter apps run their own catalog, their own stock, their own customer list. None of it talks to the website or marketplaces. Every count, every price is done twice.

REALITY CHECK

A record sold at the counter at 14:00 can be sold again on Tokopedia at 14:03. Refund, apology, review damage — **every week**, until the two systems become one.

BOTTOM LINE

Every marketplace fee hike, every Instagram DM inquiry, and every counter transaction that never touches the website is **margin the shop is quietly leaking** — plus data the shop never gets to own. The build stops the leak.

// Sources for fee data: public Tokopedia & Shopee seller-fee schedules 2024–2025. Xendit QRIS pricing: xendit.co / pricing.

The counter, on one system. Not two.

FEATURE 04 · IDR 14M

Tablet POS with a live tie to every other channel.

The same tablet that scans a walk-in customer's release decrements the stock the website reads at the same moment. Same catalog, same customers, same wantlist, same audit log.

- Tablet web POS
- Label & receipt print
- Walk-in capture
- Refunds & holds
- Barcode scanning
- Cash + QRIS + card
- Shift & drawer reports
- Offline queue

// CUSTOM POS VS OFF-THE-SHELF (MOKA, PAWOON, ISELLER)

DIMENSION	OFF-THE-SHELF POS SAAS	MEDIUM FORMAT CUSTOM POS
Catalog source	✗ Re-entered by hand — no Discogs metadata	✓ Same catalog as website & marketplaces
Stock & inventory	✗ Separate database, reconciled in Excel	✓ One counter — web, POS, marketplaces read same rows
Customer records	✗ Separate app, no wantlist	✓ Same profile as website · wantlist visible at counter
Consolidated purchase orders	✗ Not supported — restock by memory	✓ AI-drafted from sell-through + wantlist + marketplace demand
Data ownership & export	✗ Vendor SaaS cloud · CSV export limits · vendor lock-in	✓ Your Postgres on your VPS · full SQL access
Monthly cost	✗ IDR 300–700k / mo per terminal SaaS	✓ Included in retainer · no per-terminal fee

WHY IT'S MORE SECURE

Your VPS, your Postgres, your rules.

Every record — sales, stock movements, customer PII — lives on **your** VPS, not on a vendor's shared cloud. TLS end-to-end (Let's Encrypt), Auth.js JWT sessions, per-role RBAC on every write, and a full audit log on stock, price and order changes. Nightly encrypted Postgres backups to object storage.

AI-ASSISTED PURCHASE ORDERS

One draft PO per distributor, every morning.

Overnight job reads counter sell-through, website demand and marketplace inquiries. Aggregates by title & distributor, then drafts a consolidated PO ready to send — the shop replaces guessing with signal. Something off-the-shelf POS can't do, because off-the-shelf POS can't see your website.

The own front door. Not a rented shelf.

FEATURE 02 · IDR 22M

Every discovery, on your domain — cart, checkout, capture.

Instagram bio link, QR code on the sleeve at the counter, printed flyer — they all land here. Every arrival goes through cart and Xendit checkout on **mediumformat.id**, not a DM thread.

- Homepage & journal
- Release detail + tracklist
- Cart & guest checkout
- Biteship shipping quotes
- Shop / release browser
- Track previews · 3 sources
- Xendit QRIS · VA · card
- Wantlist & accounts

// THE INSTAGRAM / FACEBOOK REDIRECT · TODAY VS WITH THE STOREFRONT

× TODAY · DM FUNNEL

Discovery on IG → DM → screenshot → bank transfer photo

- 01 Buyer scrolls Instagram, sees a story or post
- 02 DMs "berapa harga?" — Medium Format replies manually
- 03 Payment link shared as screenshot, or bank details typed
- 04 Transfer photo posted back, reconciled in Excel
- 05 No email captured · no cart to abandon-recover · no retarget
- 06 Facebook Marketplace: same, plus platform picks the buyer

✓ WITH THE STOREFRONT · OWN FUNNEL

Every IG click lands on mediumformat.id — cart in your hands

- 01 Instagram post & bio → mediumformat.id/r/{slug}
- 02 Product page: cover, tracks, condition, price, add-to-cart
- 03 Cart · Xendit checkout · QRIS · VA · card · Biteship rate
- 04 Confirmation email · customer + address recorded
- 05 Wantlist & segments feed the newsletter (see feature 06)
- 06 Cart abandonment recovery + retarget lists via your database

Marketplace fees & own-site kept — per record sale

BASIS · IDR 500,000 RECORD

TOKOPEDIA Rp 467,500 Kept after 4.5% + 2% payment	SHOPEE Rp 460,000 Kept after ~6% + 2% payment	OWN SITE · QRIS Rp 496,500 Kept after ~0.7% Xendit QRIS	DELTA / MONTH · 100 SALES +Rp 2,900,000 = Rp 34,800,000 / year kept
---	---	---	--

At 100 own-site sales / month, **the storefront line item pays for itself in ~9 months** — before counting the customer data, newsletter audience, or the marketplace-fee hikes still ahead.

One dashboard runs the whole shop. Web, POS, marketplaces.

FEATURE 03 · IDR 24M

The single window every staff role logs into.

Orders from the website, POS, Discogs, Tokopedia and Shopee arrive in one pipeline. Catalog imports pull metadata + artwork from Discogs. Every write is audit-logged and role-gated.

- Live KPI dashboard

- Inventory & variants

- Customers & wantlist

- Unified messages inbox
- Catalog + Discogs import

- Unified orders

- News / journal CMS

- 5 roles & audit log

ROLES BUILT IN

Admin · Staff · Shopkeeper · Wholesaler · Customer. Permission matrix lives in lib/permissions.ts.

// COMMON PAIN TODAY · VS THE UNIFIED BACK OFFICE

JOB TO BE DONE	CURRENT STATE (SPREADSHEETS + MARKETPLACE APPS)	MEDIUM FORMAT BACK OFFICE
Import a new release	✗ Type title, artist, cover, tracks into 4 places	✓ Paste Discogs URL → metadata & artwork imported once
Reply to a buyer message	✗ Switch between Discogs, Toped, Shopee, IG DMs	✓ Unified inbox — reply from one screen, threaded per customer
Give a staff member limited access	✗ Share a login, hope no one deletes a listing	✓ Role & audit log — every change signed & reversible
Publish a news / arrival post	✗ Post to IG only — website is static, ages fast	✓ In-app CMS · same voice on site + newsletter

One inventory. Five channels.

FEATURE 05 · IDR 20M

Every marketplace listing, every counter sale, every website order reads and writes the same stock counter in Postgres. When one sells, all the others are decremented within seconds — no more double-sold records.

PUSH · LISTINGS

Every arrival posts everywhere in one job.

One "publish" in the back office pushes the listing to Discogs, Tokopedia and Shopee with the right per-channel price, image, description and shipping profile. AI copy assist (see feature 06) drafts marketplace-safe titles per platform.

PULL · ORDERS & STOCK

Webhooks in. Reconciler nightly.

Every marketplace sale posts a webhook that decrements the shared stock counter in seconds. An overnight reconciler cross-checks each channel's inventory API vs Postgres and flags drift on a sync-health dashboard.

// IF THIS FEATURE IS DROPPED

SKIP COST

The shop lists on marketplaces manually — the way it does today.

Every price change happens 4 times. Every arrival is photographed and typed 4 times. When something sells in the shop, staff have 30 minutes to unlist it in three other places before someone else buys it. Marketplaces account for a majority of Indonesian vinyl discovery — dropping the sync doesn't drop the workload, it redistributes it to staff hours.

Owned audience. Written by AI, sent by you.

FEATURE 06 · IDR 12M

Every buyer becomes an audience you actually own.

Newsletters run on self-hosted Listmonk — no per-subscriber SaaS tax. OpenRouter drafts copy from the week's new arrivals, staff edits it in the admin, one click to send. Segments split retail from wholesale.

- Self-hosted Listmonk
- AI copy · OpenRouter
- Auto new-arrivals digest
- Promo & discount codes
- Segments & sign-up forms
- Wholesale pricing role

// AI COPY ASSIST — HOW A NEWSLETTER GETS DRAFTED

PROMPT TO OPENROUTER (AUTO-COMPOSED)

Weekly newsletter · shop: Medium Format · audience: retail vinyl buyers · voice: dry, informed, no exclamation marks.

New arrivals this week (6): GAS — Königsforst reissue (Rp 890k, 2 left) · Steve Roach — Structures From Silence (Rp 680k, 1 left) · Emeralds — Does It Look Like... (Rp 610k, 3 left) · Björk — Debut (Rp 550k, 6 left) · Fennesz — Endless Summer (Rp 640k, 4 left) · Oval — 94diskont (Rp 720k, 5 left).

Highlight the two lowest-stock titles. Keep to ≤ 90 words. Add a "Browse all six →" CTA.

DRAFT RETURNED (STAFF EDITS, THEN SENDS)

Six new arrivals. Two are already down to one copy. The GAS reissue is finally back in the racks after four months, plus a rare Steve Roach pressing that only surfaced because a wantlist match pinged us. Play them at the shop this Saturday. → Browse all six.

WHY OWNED AUDIENCE

The one channel platform pricing can't touch.

Toped and Shopee decide who sees your listings. Instagram decides what part of a post the buyer sees. Your newsletter list is the only channel where reach doesn't depend on someone else's algorithm — or their price hike.

WHOLESALE SEGMENT BUILT IN

A separate list, a separate price.

The wholesale role (from feature 03) segments the list automatically. Wholesale buyers get their own newsletter with role-priced records; retail never sees the trade prices.

Priced by feature. Skip-cost included.

FIXED PRICE • ONE-TIME BUILD

Every feature carries its own timeline and its own line item. The right column names what breaks if the feature is dropped — the reason each one belongs in the package.

#	FEATURE	TIMELINE	PRICE	IF YOU SKIP
01	Foundations & Deploy Next.js 15 · Postgres · Prisma · Auth.js · BullMQ · Docker · nginx · Let's Encrypt.	2 WEEKS	IDR 18,000,000	✗ No app runs. This is the base — cannot be dropped.
02	Public Storefront Homepage, shop, release detail, previews, cart, checkout, accounts, wantlist.	5 WEEKS	IDR 22,000,000	✗ No online store. Every IG click still lands in a DM thread.
03	Admin Back Office Dashboard, catalog, inventory, orders, customers, messages, news, roles.	5 WEEKS	IDR 24,000,000	✗ Ops moves back to spreadsheets. Every order manual. Staff cost explodes.
04	POS & In-Store Tablet POS, barcode scan, label & receipt print, cash + Xendit, shift reports.	3 WEEKS	IDR 14,000,000	✗ Split stock. Counter oversells online buyers. Off-the-shelf SaaS retakes the counter.
05	Marketplace Sync Discogs · Tokopedia · Shopee. Listings, orders, webhooks, per-channel pricing.	6 WEEKS	IDR 20,000,000	✗ Miss ~60% of Indonesian vinyl demand. Every marketplace goes dark.
06	Marketing & Newsletter Listmonk · OpenRouter AI copy · promos · segments · wholesale pricing.	4 WEEKS	IDR 12,000,000	✗ Rent your audience forever. Meta & Tokopedia set your CAC.
07	Reports & Settings Sales, inventory, channel profitability, PPN 11% tax, integrations, audit log.	3 WEEKS	IDR 10,000,000	✗ Fly blind on tax and restocking. Guessing which titles to re-order.
	TOTAL BUILD & DEVELOPMENT	18 WK	IDR 120,000,000	PACKAGE PRICE

// Timelines run partially in parallel – total wall-clock delivery is 18 weeks, not the 28-week sum of feature weeks. Payment schedule & milestones on page 10.

The store keeps running. Monthly retainer & infra.

MONTHLY · POST-LAUNCH

The build hands over on week 18. From week 19 onwards a monthly retainer keeps the software alive; a separate line of pass-through subscriptions keeps the servers, email and AI running.

TIER A · ESSENTIAL

Keep the lights on

IDR 8,000,000 / month

For steady-state operation, no active feature work.

INCLUDED

✓ Bug fixes for build defects

✓ Security patches (Node, Next, Postgres)

✓ Weekly dependency updates

✓ Daily backup verification

✓ Uptime + error monitoring

✓ Next-business-day SLA

✓ Monthly ops report

— New features & design changes

TIER B · STANDARD

RECOMMENDED

Actively evolving

IDR 15,000,000 / month

For a store that keeps releasing small improvements.

EVERYTHING IN ESSENTIAL, PLUS

✓ 8 hours / month feature work

✓ Same-business-day SLA

✓ Quarterly performance review

✓ Feature backlog managed

✓ Managed marketplace rule tuning

✓ 1× marketing campaign build / mo

✓ Rollover of 4 unused hours

TIER C · GROWTH

Actively scaling

IDR 28,000,000 / month

For rapid expansion & launch cycles.

EVERYTHING IN STANDARD, PLUS

✓ 20 hours / month feature work

✓ 4-hour SLA, business hours

✓ Weekly 1-hour office hours

✓ Priority queue for change requests

✓ On-call for launches & campaigns

✓ Dedicated Slack channel

✓ Rollover of 8 unused hours

Monthly pass-through subscriptions		PAID TO THIRD PARTIES · NOT TO BUILD TEAM
VPS · 4 vCPU / 8 GB	Contabo / Hetzner / Vultr class · runs app, worker, Postgres, Redis, Listmonk, nginx.	IDR 800,000
Domain (.id, annualised)	medium-format.id registration & renewal, amortised monthly.	IDR 25,000
Cloudflare DNS	DNS, CDN, TLS proxy — free tier is sufficient for launch traffic.	Free
SMTP (AWS SES / MailerSend)	Newsletter & transactional email · up to ~10k emails / month.	IDR 400,000
OpenRouter AI budget	Newsletter copy assist & content drafting · soft cap, top-up as needed.	IDR 500,000
Object storage (backups)	Cloudflare R2 or Backblaze B2 · 50 GB nightly Postgres + media backups.	IDR 150,000
Uptime monitoring	BetterStack / Uptime Kuma paid · 1-min checks + status page.	IDR 200,000
Xendit · Biteship · Discogs	Payments, shipping, marketplace APIs — no monthly, transaction fees only.	Variable
FIXED MONTHLY INFRA		IDR 2,075,000 / month

// Transaction fees (Xendit ~2.9% cards / ~0.7% QRIS; Biteship per shipment) scale with sales volume and are not part of fixed monthly cost.

Changing the shop later. Rate card & milestones.

RATE CARD · FIXED PRICING

Post-launch add-ons, modifications and new integrations are priced against this rate card. Time & materials work is billed hourly. Anything in the retainer's included hours is free at time of use.

Change requests · Fixed price	PER ITEM	Time & materials · Hourly	AD HOC
Copy or style tweak < 2 hours · text, colour, spacing	IDR 500,000	Standard hour Business hours (09–18 WIB)	IDR 750,000 / hr
